JESUTOFUNMI OLUWATOSIN

Product & UX Designer
United Kingdom | +44 7831 559455 | oluwatosinjesutofunmi@gmail.com
Portfolio: erastus.design | LinkedIn: Jesutofunmi Oluwatosin

PROFILE

Product & UX Designer with 3+ years' experience across fintech and residential platforms, turning ambiguous problems into development-ready journeys and prototypes. Owned end-to-end design for a regulated payments product at FirstBank, using live data to lift onboarding conversion by 10%. Works closely with Product, Engineering, Research, Brand and Compliance, and presents design rationale clearly to non-design stakeholders. Designs for AI and prototypes quickly with Claude, Codex and Figma Make, including a conversational AI finance agent concept. Designs to WCAG 2.1/2.2 standards and holds an MSc in Project Management with Data Analytics (2026).

CORE SKILLS

UX/UI Design: User-Centred Design, Interaction Design, Wireframing, User Flows, High-Fidelity Prototyping, Information Architecture, Component-Based Design (Figma: Components, Variants, Tokens, Auto-Layout)

Discovery & Concepting: Journey Mapping, HMW Framework, Experience Maps, Concept Development, MoSCoW Prioritisation

Facilitation & Collaboration: Ideation Workshops, User Feedback Sessions, Stakeholder Management, Cross-Functional Partnership with Product, Engineering, Compliance, Brand and Research, Agile / Sprint Delivery

Research & Evidence: User Research, Usability Testing, Journey Mapping, Data- and Analytics-Informed Design (Hotjar), Task Success Rate, Completion Time and NPS Analysis

Accessibility & Inclusion: Accessibility & Inclusive Design, WCAG 2.1 / 2.2

Design Systems & Hand-off: Reusable Pattern Libraries, Design Standards and Documentation, Design Enablement

AI-Enabled Design: Claude for concept-to-prototype workflows and AI-assisted ideation; working familiarity with Figma Make and Codex

Tools: Figma, Miro, Notion, Hotjar, Claude, ChatGPT, ElevenLabs

EXPERIENCE

Keys - Product Designer **Feb 2025 – Feb 2026**

Residential community platform, UK

- Mapped user journeys and interaction models using the HMW framework to surface usability gaps and non-negotiable requirements, shaping design direction ahead of build.
- Facilitated co-creation and ideation workshops with residents and stakeholders to generate and validate concepts, and synthesised feedback into design recommendations.
- Translated business, user and technical requirements into scalable, implementation-ready solutions within an agile delivery environment.
- Reviewed live product experiences against accessibility and inclusive design principles, identifying optimisation opportunities throughout the design lifecycle.
- Partnered closely with engineering to translate design intent into clear specifications and rationale, reducing development friction and time to task completion.
- Mapped end-to-end service journeys across app, community and support touchpoints, identifying where operational processes broke the resident experience.

First Bank - Product Designer **Oct 2021 – Feb 2024**

Merchant-facing payment experiences within a regulated banking environment

- Owned end-to-end design for the flagship payments products, Firstchekout, from concept and interaction design through to developer hand-off; Firstchekout processed over ₦3billion (approx. £1,700,000) in transaction value within the first year of launch with over 650+ merchants onboarded, with an early-stage completion rate that shaped a continuous post-launch improvement roadmap.
- Balanced usability with regulatory, compliance and brand requirements when shaping merchant onboarding and identity-verification flows.
- Assessed compliance and fraud risk in identity verification flows alongside the business team and product manager, ensuring ethical use of the platform and a 5% reduction in fraud risk.
- Reviewed live experiences against task success rate, average completion time and Net Promoter Score, translating findings into a 10% improvement in onboarding conversion.

- Partnered with Product, Engineering and Compliance stakeholders on EPICs and requirements so design intent was clearly communicated and accurately implemented.
- Built and documented a reusable component library and design rationale, strengthening consistency, development speed and knowledge-sharing across product and engineering teams.
- Designed merchant onboarding and identity verification across the digital journey and the backstage compliance checks behind it, balancing usability with regulatory requirements.

SELECTED CONCEPT, INNOVATION WORK & OTHER IMPACTFUL ENGAGEMENTS

ApTap Switching Funnel - Design case study **Sep 2026**

- Diagnosed and redesigned a multi-stage broadband and utilities switching funnel for UK banking-app partners: produced a PRD with personas and epics, two strategically distinct concepts (choice reduction vs. confidence signals) and a three-arm A/B test plan with falsification criteria, working within FCA / Consumer Duty and accessibility constraints.

Technology, Education and Design (TEDxWibsey) **Sep 2026**

- I drafted a comprehensive event management plan, ensuring the programme started and ended on schedule, and oversaw the attendee experience from registration through catering to the event's close. Also, I developed the MC plan and communication protocols between speakers and the audience. In addition, I received an award recognising my outstanding contribution to Bradford's technology, education and design community.

BACI (Financial Intelligence Agent), conversational AI case study **Jul 2026**

- Designed and built a bank-agnostic AI agent that analyses Open Banking transaction data, scores financial health and explains it through a conversational chat interface.
- Designed conversation flows, (fallback and error states when the AI can't answer), and ways to show how confident the AI is in its insights, so users know when to trust it.
- Prototyped in React using AI-assisted development Claude code, taking it from concept to working product without a dedicated engineer.

Sections - Community Manager **Feb 2026 – Present**

Community for Designers in UK with over 300 members

- I organised educational sessions with senior designers, including Harrison Wheeler (former Design Lead, LinkedIn) and Suraj Soren (Design Lead, BT Group), covering how designers can adopt AI as a core part of their process. Also, I organised end-of-year retreats in Albania, Wales and Montenegro to help members recharge after the year's work. Alongside this, I ran one-to-one sessions with members on practical product-improvement cases, helping them build sharper problem-solving approaches.

EDUCATION

Bedfordshire University, United Kingdom, 2024 – 2026

MSc Project Management with Data Analytics (Completed)

University of Lagos, 2019

BSc Finance

CERTIFICATIONS

- Certified Product Designer, Utiva Design School - 2020
- Certified Product Designer, Tech4Dev - 2021
- IBM Enterprise Design Thinking - 2021
- Product Management Programme, Bright Network Technology on Demand - 2024
